**105/16-15 MED**

High heat, fast track conditions

#2 Ideal blade and head is recommended

**Narrow circumferential grooves**
do not groove through the leading edge.
This will help maintain a sharp leading edge.

Angle groove approximately
15 to 20 degree angle.

Narrow circumferential sipes. Approximately half depth.

**Notes:**
- Circumferential siping and grooving helps dissipate heat.
  Also helps with sidebite.
- Cross grooving helps with forward bite and removing loose dirt.

*Yellow = Groove  White = Sipe*
