

105/16-15 MED

Slick Track conditions, not abrasive surface, minimal heat

narrow cross groove.

#2 Ideal blade and head is recommended.

When siping with (2) blades a #4 or #5 Ideal head is recommended.

(Inside of tire)

(Outside of tire)

Single circumferential sipes

Sipe should never be less than 3/8" from trailing block edge. Less than 3/8" may cause chunking on trailing edge.

Notes:

- Circumferential siping and grooving helps dissipate heat. Also helps with sidebite.
- Cross grooving helps with forward bite and removing loose dirt.

Yellow = Groove
White = Sipe
